***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to a distillation system for recovering acetic acid from water during terephthalic acid production, classified in class 202, subclass 160
- II. Claims 14-22, drawn to a distillation method for recovering acetic acid from water during the production of terephthalic acid, classified in class 203, subclass 14.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process such as: an azeotropic distillation using a distillation column operated at ambient pressure in the terephthalic acid plant; a liquid-liquid extraction process followed by a series of distillation steps to recover the acetic acid and to recirculate the extractive agent back to the extraction stage as recognized by applicants, noting e.g., the paragraph bridging pages 3-4 in the instant specification.

Art Unit: 1764

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification; and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
